

A gas has a temperature of 300K. What is the average kinetic energy of a gas molecules.

The Boltzmann constant is  $k = 1.38 \times 10^{-23} \frac{\text{J}}{\text{K}}$ .

A gas has a temperature of 300K. What is the average kinetic energy of a gas molecules.

The Boltzmann constant is  $k = 1.38 \times 10^{-23} \frac{\text{J}}{\text{K}}$ .

$$\langle K \rangle = \frac{3}{2}kT = 6.21 \times 10^{-21} \text{ J}$$
