

A capacitor is connected to a power supply that is set to 300 volts. The amount of charge on the plates is 0.06 coulombs. What is the capacitance of the capacitor?

A capacitor is connected to a power supply that is set to 300 volts. The amount of charge on the plates is 0.06 coulombs. What is the capacitance of the capacitor?

$$Q = CV$$

$$\rightarrow C = \frac{Q}{V} = \frac{0.060\text{C}}{300\text{V}} = 2.0 \times 10^{-4} \frac{\text{C}}{\text{V}}$$
